

IML meeting – NEWS

David Rousseau (LAL-Orsay) Lorenzo Moneta (CERN)
Loukas Gouskos (CERN) Paul Seyfert (CERN)
Rüdiger Haake (Yale University)

new CMS coordinator

Welcome to Loukas Gouskos as new IML coordinator for CMS

Following the annual workshop, we're digesting the feedback forms for the planning of next year's workshop.

IML workshop 2020

Next year's workshop possibly early June to avoid collision with "Connecting the Dots" and "Dark Machines".
More news once things are fixed.

Do you think that the talks were generally at the right level?

35 Antworten

- Yes
- No, too simple
- No, too complex
- To complex for me but I don't know HEP
- The level was very much dependent on the speaker. I would have preferred less talks with more allocated time.

- No, too complex
- To complex for me but I don't know HEP
- The level was very much dependent on the speaker. I would have preferred less talks with more allocated time.

Obviously varies from talk to talk, but overall you managed to prepare your presentations on the right level.

Thanks you!

Do you think that enough time was allocated to tutorials?

Hard to get the time assignment right (not everybody will attend). Some suggestions to have the tutorials before rather than after the other workshop parts.

Bonus items on the agenda

This year we did not hold a "ML challenge" in order to prioritize other aspects of the workshop. What do you think of this choice?

40 Antworten

- I prefer not to have a challenge in the future
- I am neutral about the possibility of a challenge in the future
- I would prefer to have a challenge in the future
- I do not understand what is meant by a "ML challenge"

Challenge: a data mining task is published, participants should solve it with ML, maximising a figure of merit. Like Kaggle.

This year we did not hold a "hackathon" in order to prioritize other aspects of the workshop. What do you think of this choice?

40 Antworten

- I prefer not to have a hackathon in the future
- I am neutral about the possibility of a hackathon in the future
- I would prefer to have a hackathon in the future
- I do not understand what is meant by a "hackathon"

Hackathon: participants sit in a room, no talks / discussion, just collaborating in working on some task. Ability to ask others for help, suggestions.

15:15 → 15:35 **Lund jet images from generative and cycle-consistent adversarial networks**

Speaker: Frederic Alexandre Dreyer (Oxford)

🕒 20m 

15:40 → 16:00 **RNN for stop search in ATLAS**

ATLAS-CONF-2019-017

Speaker: Zuli Paola Arrubarrena Tame (Ludwig Maximilians Universität (DE))

🕒 20m 

16:05 → 16:25 **Jet identification based on interaction networks**

Speakers: Eric Moreno (Fermilab), Eric Moreno (California Institute of Technology)

🕒 20m 

16:30 → 16:50 **Machine Learning for the LHCb Vertex-Locator calibration**

Speaker: Maciej Witold Majewski (AGH University of Science and Technology (PL))

🕒 20m 

slides (excl. cern logo) will appear on
